TEXIPOL® 63-201

Anionic inverse emulsion thickener

INTRODUCTION

TEXIPOL 63-201 is an inverse emulsion thickener which imparts a long stringy flow to a wide variety of aqueous and non-aqueous compositions and is effective over a wide pH range. **TEXIPOL 63-201** is supplied as an easy to use, low viscosity liquid which gives an almost instantaneous thickening effect on direct mixing into the composition. The polymer in **TEXIPOL 63-201** is already in solution (as the sodium salt) and therefore does not require any other additives to promote thickening e.g. alkali, surfactant etc.

TEXIPOL 63-201 is APEO free.

CHARACTERISTICS (Not to be taken as a specification)

Appearance		Creamy liquid
Relative density at 25ºC / 77°F		~1.05
Inverse emulsion viscosity*	cps	1,000 - 5,000 cps
Thickened deionized water**	cps	700 - 2,000 cps
Flow of thickened compositions		Long stringy
Polymer charge		Anionic
Polymer compatibility		Anionic / non-ionic
Flash point	ºC / °F	≥100 / 212
Optimal pH usage range		5.0 – 12.0

* Brookfield RVT, Spindle #3, 20 rpm at 25ºC / 77°F.

** Deionized water thickened with 1% of **TEXIPOL 63-201** as supplied. Brookfield RVT, Spindle #3, 50 rpm at 25ºC / 77°F.

APPLICATION

TEXIPOL 63-201 has been found useful for thickening highly filled carpet backing compounds as well as other aqueous based adhesive and coating systems. It is also possible to thicken certain non-aqueous systems such as simple alcohols and glycols.

A good starting point is to add up to 4% of **TEXIPOL 63-201** (depending on the viscosity required) directly to the composition to be thickened and then homogenize the mix thoroughly. If the resultant mix is too thin add more of **TEXIPOL 63-201** and, if it is too viscous, add more unthickened composition and homogenize.

It is not uncommon for Texipol® inverse emulsions to separate over time. This does not in any way indicate that the material is unfit for use. We recommend that Texipol® be stirred prior to use using a low-shear mixing system (e.g. with a paddle or handheld mixer) to ensure that the material is uniform when added to a formulation. Further, for formulations with a low percentage of water and/or where a low level of Texipol® is required, we recommend that water be added to the Texipol® prior to addition to the formulation (roughly 4 - 7% of Texipol® in water). This will prevent the possibility of localized pockets of thickened water in the formulation.

PACKAGING

TEXIPOL 63-201 is available in a 441 lb. net weight steel drum and is imported from the United Kingdom.

STORAGE

TEXIPOL 63-201 should be stored at temperatures between 5 - 40ºC / 40 - 105°F. If the product freezes, thaw completely by placing the container in a warm water bath and homogenize completely before use. **TEXIPOL 63-201,** can be stored in glass, stainless steel, plastic or epoxy-lined vessels. **TEXIPOL 63-201** should not be stored in mild steel, copper or aluminum containers.

HEALTH & SAFETY

Please see separate Material Safety Data Sheet.
